

**-Several experts raise concrete concerns about possibly existential risks from the experimental sub-nuclear reactor LHC at the European Centre of Nuclear Research, CERN.**

-Until now, **no independent risk assessment** has been conducted.

-Scientific Study: **CERN meets less than a fifth of the expected criteria for a modern risk assessment.** Still, the CERN Member States leave risk management up to the operator CERN itself.

-CERN is located on an "extraterritorial area": **No possibilities of direct democratic influence.**

-The LHC currently operates at record levels - on half of its designed capacity. **In 2013, construction defect repairs costing up to CHF 1 billion are planned – in order to operate the "Big Bang Machine" at double the energy.**

- "LHC-Critique" and international experts have created a **number of papers with specific safety-related proposals.**

- "LHC-Critique" demands: **Immediate initiation of an independent and multi-disciplinary risk assessment.**

- **Until further no billion-dollar upgrade of the LHC!**

- **No new construction of a giant heavy ion accelerator in Darmstadt (FAIR)!**

- **Write to your government and support "LHC-Critique" at: [www.LHC-concern.info](http://www.LHC-concern.info)**
